EDUCATION

San Francisco State University **San Francisco, CA**
Bachelor of Science, Computer Science (Minor in Mathematics) Expected December 2026

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript

Databases: MySQL, MongoDB, PostgreSQL, Pinecone

Cloud/DevOps: AWS, Docker, Railway, Vercel, Google Firebase

ML/AI Tools: Keras, TensorFlow, PyTorch, LangGraph, LangChain, OpenCV, LangSmith

PROFESSIONAL EXPERIENCE

Full-Stack Engineer – Develop for Good May 2026 – Present

Firebase/Firestore, React Native (Expo), TypeScript, Zod, Jest, Github Actions

- Collaborated cross-functionally with designers, software engineers, and clients in an Agile environment to transform 30+ Figma designs into reusable React Native components and production-ready screens.
- Engineered backend for authentication, goal management, and weekly streak services with Firebase for a React Native platform that can support 300+ end users (consumers and staff) following UserTesting validation.
- Implemented role-based authorization using Firebase Authentication, Firestore Security Rules, Zod validation, and AsyncStorage, preventing unauthorized access while avoiding the need for higher-tier Firebase features
- Documented developer-friendly WCAG accessibility guidelines and audited code to follow the guidelines, creating an accessible platform that can be used by screen readers on both Android and IOS

PROJECT EXPERIENCE

HowToKeepPlantsAlive: AI Plant Recommendation System & Care Platform **Github**

LangGraph, PyTorch, Python, MongoDB, Gemini, Cohere, DVC, Prefect, MLFlow, Pinecone, Feast, TypeScript

- Engineered a two-tower recommendation system that recommend plants based on users' environment and preferences, improving Recall@10 by 6.6× over semantic similarity baseline
- Designed a rule-based simulation framework to generate synthetic plant–user interaction data and benchmark the recommendation model's ability to learn behavioral patterns, successfully capturing 8 of 10 predefined rules
- Developed LangGraph AI Agents, capable of plant Q&A and comparisons, using a hybrid RAG pipeline of Pinecone vector search and BM25 retrieval over curated botany datasets

Chico State University Chatbot: DxHub AI Summer Camp at Cal Poly San Luis Obispo **Presentation | GitHub**

Node.js, AWS Bedrock, AWS Lambda, AWS API Gateway, AWS OpenSearch Serverless, AWS S3, AWS CloudFront

- Selected as 1 of 100 participants from 1,000+ CSU applicants for the DxHub AI Summer Camp and assigned to a team developing an AI chatbot for Chico State University stakeholders
- Engineered a production Retrieval-Augmented Generation (RAG) system within AWS ecosystem by building a knowledge base from 230+ university and local business webpages, enabling transparent responses with inline citations and source references
- Developed a serverless backend using AWS Lambda and API Gateway to orchestrate user requests, perform LLM inference with Amazon Bedrock Claude Sonnet, that can support English/Spanish queries for 500+ daily users

GaitorGate: Full-Stack Search Engine for AI Tools **GitHub**

Team Lead + Backend/Database Engineer | LAMP Stack, Flask, AWS EC2, Google Gemini

- Led a team of 6-person over a 4-month period to develop and deploy a production-grade search platform for 200+ AI tools, winning 1st place out of 12 teams in a software engineering competition
- Architected a 14-table relational MySQL database and search pipeline supporting ~190 AI tools and 500+ keywords, implementing FULLTEXT and foreign-key indexes for efficient search and data retrieval.
- Developed Flask API endpoints for authentication, query execution, and user-uploaded tool ingestion, validating system reliability through 20+ student testers
